Open Knowledge for a Sustainable Future: Research, Ethics, and Wikipedia

Week 1 (Academic + Wiki) — Course Overview & Framing

Francis Bond (Academic) Pavel Bednařík (Wiki)

Palacký University Olomouc | Wikimedia ČR

Today

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

Roadmap

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

What This Course Is About

This course is about learning to write better.

- Academic vs. encyclopedic writing (audience, voice, structure)
- Sustainable knowledge: FAIR / CARE, openness, ethics
- Practice both: (Academic) paper and (Wiki) article
  - focusing on environmental issues
- Learn transferable skills: argument, evaluation, revision, collaboration
- We care more about content than style

Practicalities

- Everything is on the course website
  - schedule, assessment, deadlines, readings, these slides
- Tuesdays 16:45, Room 3.51, tř. Svobody 26
  - Francis: 90 minutes, **16:45–18:15**
  - Pavel: three hours, 16:45–19:45, with the new material in the first 90 minutes and practice after, so you can finish at home if you must leave
- Pavel teaches in Czech, Francis in English
- In cooperation with Wikimedia ČR and the Asian Month on Czech Wikipedia (November)

Two Paths to Better Writing

(Academic) Short paper (4–8 pp *plus* refs)

- Argument-driven, thesis-focused
- Synthesis and analysis
- Scholarly voice & citation norms
- Writing part of a larger process

(Wiki) Wikipedia article

- Neutral, verifiable, no original research
- Clear structure; accessibility
- Community standards, consensus

- One goal: knowledge others can trust, find and build on
- We compare the two genres: seeing what each one does makes you better at both

Academic vs. Encyclopedic Writing

	(Academic) paper	**(Wiki) article**
Audience	specialists	general public
Purpose	argue something new	summarise what is known
Voice	hedged, theory-aware	neutral, accessible
Evidence	engage the literature	cite reliable secondary sources
Structure	thesis / IMRaD	lede + sections

IMRaD = Introduction, Methods, Results, and Discussion

- Wikipedia's **neutral point of view** (NPOV) and **no original research**: an article reports what reliable sources say, it does not argue

Using AI in this course

- **Not for writing.** You are here to practise writing. The words in your paper and your Wikipedia article must be your own.
  - This includes proofreading: a model would rewrite your sentences into fluent, anonymous English. Spell-checker yes; rewrite no. For help with language, ask us
- **For research, with disclosure.** Use it to explain a concept, suggest search terms, or point you towards literature
- **Say what you used**, naming the tool and the version, and what you used it for:
  - *Claude Opus 5 (Anthropic) was used to suggest search terms. All sources were located, read, and cited by me.*
- What a model tells you is a lead, not a source: find the original, read it, and cite that
- Undisclosed use counts as academic misconduct
- Full policy, and how assessment works, on the course website

Roadmap

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

Why It Matters

- Writing is thinking: you find out what you believe when you try to write it down
- A written claim comes with its evidence and reasoning, so others can check it
- It travels: readers you will never meet can reuse, criticise or extend it
- Written, cited and reviewed work is what a discipline counts as knowledge

Write for your Audience

Three questions to ask before you write:

- **Who are they?** terminology, the arguments they expect
- **What do they already know?** assume that, explain the rest
- **What do they want from you?** that depends:

Writing for	**they want**
basic research	understanding
applied research	better practice
literary studies	better appreciation
the fine arts	to be engaged
Wikipedia	an answer, quickly

- Different disciplines are interested in different things (not always sensibly)

Define Your Purpose

- Explain, evaluate, compare, propose, synthesise?
- The purpose decides what evidence you need and how to order it
- One paper, one purpose, stated as a thesis that is:
  - **Specific**: a claim you can support in a short paper
  - **Contestable**: not a truism; invites argument
  - **A roadmap**: hints at the reasons to come

Roadmap

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

Common Structures

- Humanities: **thesis-driven essay**
- Social and natural sciences: **IMRaD** (+ Conclusion)
- Linguistics:
  Intro → Background → Data/Methods → Analysis → Discussion → Conclusion
- Computer Science:
  Intro → Related Work → Method → Data → Experiments/Results → Analysis → Conclusion
- Hybrids: literature review + case study; policy analysis + recommendations

Start and End Well

- The Introduction sets the stage
  - Context → Problem → Question/Claim → Contribution → Roadmap
  - Avoid: history lessons without focus; claims with no stakes
- The Conclusion drives home the argument
  - Answer the question; synthesise findings
  - State implications, limits, next steps
  - Avoid: repeating the intro; new evidence in the last paragraph

A Minimal Model Outline

- **Abstract** (150–200 words)
- **Introduction**: context, question, thesis, roadmap
- **Body**: 2–3 sections building your case
- **Conclusion**: answer, implications, limits
- **References**: consistent style (we will use APA)

Roadmap

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

Compare three kinds of Writing

Do data centres use too much water?

- An **encyclopedia** summarises what is known
  - *Environmental impact of AI*, the *Water usage* section (Wikipedia contributors, 2026)
- An **academic paper** argues a case, hedged and cited
  - Mytton (2021), *Data centre water consumption* — six pages, open access
- A **blog post** argues a case too, but by its own rules
  - Masley (2025), *The AI water issue is fake*

All three describe the same world. They disagree about how much it matters.

Write Three Paragraphs (by Sunday 11 October)

- Read all three, then write roughly 400–500 words:
  - **What does each one claim?** State it in one sentence each
  - **Where do they differ**, and is it about the facts or about what the facts mean?
  - **Which did you trust most, and why?** Name what convinced you — evidence, sources, hedging, tone
- Post it on Moodle by Sunday 11 October, and bring it to class on 13 October
- **Your own words**: no generative AI. Cite the three sources and anything else you read
- Not graded. We use it to see how you write; you use it to practise reading like a writer. We come back to it on 13 October

What a Paragraph Should Do

- One paragraph, one point
- **Topic sentence first**: the reader knows the point before the detail
- Then support it: evidence, example, or reason
- End by linking to what comes next
- Read it aloud — if you run out of breath, the sentence is too long

Roadmap

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

The Rest of the Course

Date	Who	What
29 Sep	Pavel	Wikipedia rules: accounts, sandboxes, the five pillars
6 Oct	Francis	Academic vs. encyclopedic writing: what is your message?
13 Oct	Francis	Finding, judging and citing sources
20 Oct	—	*Reading and writing week*: no class
27 Oct	Francis	FAIR: making data findable and reusable
3 Nov	Pavel	Writing a good Wikipedia article
10 Nov	Francis	CARE, ethics, and honest persuasion
17 Nov	—	*Public holiday*: no class
24 Nov	Pavel	Feedback on Wikipedia articles
1 Dec	Francis	Peer review: how it works
8 Dec	Francis	Peer review: doing it — bring your draft
15 Dec	both	Conclusions and reflection

Both assignments are due in January: dates and weights on the course website.

Roadmap

1. Course Overview
2. Why Academic Writing Matters
3. Global Structure
4. Your First Writing Task
5. What's Coming
6. (Wiki) Orientation & Onboarding

(Wiki) Ground Rules

- Wikipedia **Five pillars** (Wikipedia contributors, 2025)
- **UCoC**: Universal Code of Conduct (Wikimedia Foundation, 2021)
- Enrol on the **Programs & Events Dashboard** (Wiki Education, 2025)
- Starter modules: editing basics, sourcing, plagiarism

Before Next Time

- Create a Wikipedia account and enrol on the Dashboard
- **29 September**: Pavel's session on Wikipedia, in Czech
- **11 October**: post your three paragraphs on Moodle
- Start noticing environmental topics you might want to write about

Acknowledgements

- **AI disclosure: GPT-4o** in ChatGPT (OpenAI, 2025) was used to draft an early version of these slides.
- **Claude Opus 5** (Anthropic, 2026) was used to check the slides: to resolve every DOI against Crossref, fetch every URL, and compare each quotation with its original. The prompt was of the form

```
Verify every claim, DOI, URL and quotation against a real source. Where you cannot
verify something, say so rather than guessing --- never invent a reference.
```

  Each correction names the source it was checked against. Responsibility for what remains is mine.

Appendix

These slides are here for reference. We come back to all of them later in the course.

Choosing and Using Evidence (13 October)

- What can be trusted as evidence?
  - Peer-reviewed articles; scholarly books
  - Policy reports; official statistics; reputable NGOs
  - Data (quantitative/qualitative), corpora, case studies
- Evaluating sources
  - **Authority**: who wrote it? venue? peer review?
  - **Recency/Relevance**: up-to-date, on-point
  - **Method/Transparency**: can you inspect or replicate?

Integrating Sources

- **Summarise**: the key point in your words, with a citation
- **Paraphrase**: restate it in your words, for your argument
- **Quote**: sparingly, when the exact wording matters
- Always say what the source does for **your** claim
- Use several sources together
  - Put them side by side: where do findings, methods or assumptions differ?
  - Say what the disagreement means for your question

Sources in Other Languages

- Sources in other languages are often ignored: local journals, government reports, the data itself, …
- Czech sources on Czech topics are usually the richest
- Summarise fairly: translation adds its own slant
- Cross-check facts across languages

Academic Integrity

- Cite all sources (including data, images)
  - Read what you cite, don't cite transitively (or acknowledge when you do)
  - Cite in detail — give page numbers (especially for books)
- Proper paraphrase: change structure and wording, cite anyway
- Avoid patchwriting; keep notes disciplined
- Never fabricate a source — and never trust a model's citation until you have found it

Sustainable Knowledge (27 October)

About data more than writing: this is what makes knowledge last.

- **FAIR**: Findable, Accessible, Interoperable, Reusable Wilkinson et al., 2016
- **CARE**: Collective benefit, Authority, Responsibility, Ethics Carroll et al., 2020
- **Open Science** (UNESCO Recommendation) UNESCO, 2021
- **Knowledge equity** (Wikimedia 2030) Wikimedia Foundation, 2020

Writing is Revising (8 December)

- Draft fast; revise for structure, then style
  - **Content is more important than presentation**
- Read aloud; reverse outline; get feedback early
- Track changes; keep a revision log

Peer Review is part of the process

- Giving feedback
  - Focus on **claims, evidence, logic**, not just grammar
  - Ask: what is the thesis? is it supported? what is missing?
  - Suggest a specific change
  - Don't be reviewer three
- Responding to Feedback
  - Separate criticism into categories (structure, evidence, style)
  - Decide: change, clarify, or justify (with reasons)
  - Write a brief **revision memo**: what changed and why

Common Mistakes

Mistake	Fix
Topic too broad	narrow to a question you can answer with the evidence you have
Claim without evidence	support it, and show how the evidence bears on the claim
Source dump	synthesise; explain why each source matters *for your thesis*
Structure drift	reverse outline; re-order sections to match the argument
Jargon overload	define key terms once; prefer plain English or Czech

Pre-Submission Checklist

- Clear thesis in the introduction
- Section headings reflect argumentative moves
- Each paragraph has a topic sentence and a purpose
- Claims are cited; sources are integrated (not just quoted)
- Figures/tables are labelled and discussed
- Proofread last, once the structure is settled

What Good Work Looks Like

- The reader always knows what you are claiming, and why it matters
- Every claim rests on a source the reader can check
- Attribution is accurate and the tone is respectful (on Wikipedia, the UCoC)
- Others can find the work, reuse it and build on it
